

ENVIRO-COAT™

Premium DECK SCREWS

Nibs under head

Cuts the wood and insures a flush finish. Nibs also help prevent the screws from backing out where vibration is likely.

Type-17 tip

Helps prevent wood from splitting and pre-drills to lessen user fatigue.

Larger diameters

Larger diameters provide durability to withstand higher stress loads over time and when wood twists.

Deeper thread cut

The threads are coarse with a high thread profile. This provides maximum holding power and allows for a quicker drive penetration. Coarse threads are needed for wood working applications.

ENVIROCOAT™

Special coating technology offers excellent corrosion resistance. Exceeds 1,500 hour salt chamber testing without rusting. Color-matched to pressure-treated wood. Provides lubricity to ease driving.

Items available on a special order basis in phillips and square drive only.

Size	Pcs /Ctn	Wt.
7x1-1/4	8000	32
7x1-5/8	5000	26
